

Enosh Earnest

Derby, UK | 07902 478381 | enoshearnest.com | [Email](#) | [LinkedIn](#) | [GitHub](#)

Final-year Computer Science student on track for a First. Co-founder of a live agentic AI platform projectlevi.co.uk, built with LangGraph, FastAPI, and Docker. Experienced in designing and shipping multi-step LLM pipelines with structured output, prompt engineering, and state management. Currently developing a production ready IoT solution for [Rolls-Royce](#). Seeking an AI Engineering role where I can take ownership of features from prototype to production.

TECHNICAL SKILLS

Backend & Core Engineering: Python, SQL, REST APIs, FastAPI, HTML, CSS

Cloud & DevOps: Microsoft Azure, Docker, Git, CI/CD

AI & ML: Agentic AI (LangGraph), LLM APIs (Gemini, Google Vision), Neural Networks (TensorFlow), Fine-tuning (LLaMA, Mistral), Predictive Modelling, AI-Augmented Engineering (Claude, Cursor), NLP (Semantic Analysis), RAG

Data Engineering: Data Pipelines, Data Normalisation, SQL Server Management Studio

Development Practices: Unit Testing, UAT, Agile/Scrum

Tools: Microsoft Dynamics 365, MongoDB Compass, SQL Server Management Studio, Postman (API testing)

EDUCATION

University of Derby

Bachelor of Science (Honours) in Computer Science

Expected: July 2026

IoT & AI Engineering | Rolls-Royce Collaboration

Keywords: Industrial IoT • LoRaWAN • Predictive Maintenance • Edge-to-Cloud Telemetry • Python

- Built a production ready **LoRaWAN** infrastructure using selected gateways and sensors, streaming live telemetry to **The Things Stack** for cloud-based asset monitoring, improving data acquisition frequency by **20x** via custom downlink orchestration.
- Developing a **predictive maintenance (PdM)** pipeline in Python to automate anomaly detection and trend recognition on lab validated time-series datasets, surfacing proactive failure signals for industrial equipment.
- Conducted a comparative feasibility study across **LoRaWAN vs BLE** protocols and established calibrated benchmarks at 0.01°C resolution, delivering a **data backed hardware recommendation** to Rolls-Royce engineering teams.

EXPERIENCE

Co-Founder & Co-Developer | projectlevi.co.uk

May 2025 - Present

Keywords: Agentic Orchestration • EdTech Innovation • Entrepreneurial Leadership • Pair Programming • Full-Stack AI

- Leading the development of an **Agentic AI-powered career readiness platform** with emphasis on skill analysis, utilising a **Vue.js (Frontend)** and **Python/FastAPI (Backend)** full-stack architecture to deliver personalised **data-driven learning roadmaps** to university students.
- Built and deployed a multi-step agentic system using **LangGraph** and **Gemini's API**, ensuring **95% consistency** in structured JSON outputs through iterative prompt engineering and state management.
- Established a scalable, well-governed architecture using **Docker** and **CI/CD foundations**, positioning the product for a live market launch on the **1st of May 2026**.
- Implemented a custom **LLM-as-judge evaluation framework** using [Gemini 3.1 Pro](#) to monitor output accuracy and pipeline latency, ensuring consistent **production grade reliability** across agentic workflows.

PROJECTS

SEEC - A Public Transport App for the Visually Impaired | React Native • Node.js • Google Directions API

[GitHub](#)

- Led a team of four in an **Agile/Scrum environment** to design and deliver a **voice controlled mobile application** for [Journeio Plc](#), enabling visually impaired users to navigate bus journeys independently.
- Improved ease of following navigation instructions by 30% and **reduced user anxiety by 25%** through a dynamic voice feedback system built with **Expo Speech**, validated through structured user acceptance testing.
